

Reverse with RADAR™

Reverse with Safety ...

Waste Industry RADAR reversing systems

Reversing accounts for nearly 1 in 4 deaths involving vehicles at work

Working closely with the waste Industry Sentinel Systems provides patented 'reverse with radar' systems for all types of waste vehicles. Some examples are given below.

Road sweeper radar reversing system without auto-braking

- Advanced Doppler radar system is fitted to the rear of the road sweeper.
- When reversing if a hazard is detected a buzzer and light provides an in-cab warning to the driver.

(Road sweepers can also be supplied with auto-braking if required)

Refuse vehicle radar reversing system with auto-braking

- Advanced Doppler radar system is fitted to the rear of the vehicle.
- When reversing if a hazard is detected a buzzer and light provides an in-cab warning to the driver.
- Brakes are automatically applied if the vehicle is too close to the hazard.

Benefits of the system

- Prevents injury to personnel and members of the public while vehicles are reversing.
- Prevents damage to vehicles while reversing.
- Can reduce potential legal claims caused by damage and injury resulting from reversing accidents.
- This system is unaffected by wind, rain and dirt.
- Extendable one-year warranty.
- Helps compliance with HSE guidelines on reversing.

Can you afford to be without it?
